THE COVER FLOWER

C. Hybrid 'Dr. Polizzi'

This new hybrid has not bloomed on the West Coast but according to Joe Pyron in the 1970 Yearbook "has attracted considerable attention wherever shown". It was originated and propagated by Tammia Nursery of Slidell, Louisiana, the originator of C. Reticulata 'Lila Naff'. This hybrid is a cross between C. saluenensis and C. reticulata 'Captain Rawes'. The semi-double to peony form, 5 inch flower is white to flesh, borders a deeper shade of rose.

NOTICE

The **Huntington Botanical Garden** is seeking a camellia enthusiast to be in charge of their **Camellia Garden**. He will be expected to carry out the more exacting horticultural tasks and to supervise two helpers.
