Where Are We Missing The Boat, Ben Berry

## THE COVER FLOWER

'Powder Puff' is a C. Japonica chance seedling. The flower is a small white peony form with 8 to 12 outside white petals. The plant has a medium growth and it blooms in mid-season. The cultivar was discovered and developed by Mr. A. M. Hartman of San Fernando Valley. It was introduced in 1960. The color separation is through the courtesy of the New Zealand Camellia Society. The photo was made by Yvonne Cave of Wanganui, New Zealand.
