THE COVER FLOWER

'CORAL MIST' is a *C. japonica* seedling developed by Hugh Shachelford, of Albany, Georgia and released in 1959. The flower is a white veined and splotched, clear pink with a loose peony form. The plant has a vigorous, compact, up-right growth and it blooms in mid-year. The photo was taken by Yvonne Cave and the color separations were furnished courtesy of the New Zealand Camellia Society.
