PLEASE READ BEFORE ORDERING

ALL OF OUR CAMELLIAS are container-grown. However, in order to eliminate excess weight and thereby cut transportation costs, camellias for shipping will be balled and wrapped in waterproof material (unless requested otherwise). Notice to residents of the states of Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas and Virginia: All shipments of Camellias into these states will be bare-rooted, reballed in peat moss, and properly wrapped for shipping. We are experienced in shipping bare-rooted Camellias and have found the above method very successful. All states requiring bare-root shipment of Camellias as listed above must be inspected and certified by the Los Angeles County Dept. of Agriculture as required by the quarantine states. The fees charged for this service are as follows and must be added to your order.

1 to 10 plants \$6.00

11 to 50 plants \$12.00

51 to 100 plants \$15.00

101 to 200 plants \$20.00

WE HAVE SUCCESSFULLY shipped balled and bare-rooted Camellias all months of the year, but for best results we advise shipment from mid-October through March, during which time shipments will be made weekly. From April through September shipments will only be made during the first and third weeks of each month. Due to the holiday overload on shipping lines, we do not ship from Dec. 1 through Jan. 1.

ALL AZALEAS offered in this catalog are grown in No. #1 containers and will be shipped in same or balled and wrapped. Azaleas can be shipped safely throughout the year. Shipments of Azaleas to states and foreign countries which require bare-rooting (or if requested) a charge of 50¢ per plant will be added. **Notice to residents of Oregon and Washington:** These states do not allow the shipment of Azaleas.

GUARANTEE

We give no guarantee that our plants or scions will live and grow, but we do guarantee our stock to be well rooted, well grown, true to name and properly packed for shipment. Claims for shortages and errors must be made immediately upon receipt of shipment and we will gladly rectify our mistake, but in no instance will our liability be more than the purchasing price.

Please note that our responsibility ceases upon delivery to forwarding companies and any claims for damages en route are to be made upon them by the purchaser. Risks and costs of transportation belong to purchaser.

WE ARE PROUD of our Shipping Department and we have countless complimentary letters from out-of-state purchasers of our Camellias and Azaleas. All stock is expertly and efficiently crated and packed in strong lightweight crates and tamper-proof cartons. Every order, regardless of size, is fitted into custom-built crates.

IN THE PAST years we have shipped Camellias and Azaleas throughout the United States and many foreign countries with the utmost success, and feel confident that with our experience our customers are receiving the finest quality plants as a result of the best packing and crating possible.

We are exerting every effort to produce the very best stock that can be grown, and in our 38 years of experience we believe we have never offered bigger and better values than we are this season. We secure our propagating wood from only the best type of plants, and by doing this we furnish you stock that is the best possible for you to get anywhere, regardless of price. If you will give us your order, we know you will be more than pleased with our quality plants.

TERMS OF SALE — CRATING CHARGES

Please send your remittance with your order. We cannot process any order on which full payment has not been received. All foreign orders must be paid in U.S. currency. California customers add 6% sales tax to total. With first order be certain to use the special order blank on the back page of this catalog. Prices in this catalog are subject to change without notice. Please specify the way you wish to have us make shipment (air freight, parcel post, or bus.) When no instructions are given, we will ship your order by the method we feel best suited for your location and size of order.

TRANSPORTATION CHARGES: Please note that the cost of transportation belongs to the customer; all orders are F.O.B. Altadena, California.

CRATING CHARGES: On orders of \$50.00 or more there is no crating charge, but if your order amounts to less than \$50.00, add \$7.50; if your order amounts to \$15.00 or less, add \$3.50 in order to help cover crating costs.

CAMELLIA CULTURE

SOIL — Basically all camellias require the same culture. They prefer a well-drained soil that is high in humus content and just slightly acid. In preparing the soil for planting in the ground, mix equal portions of sandy loam and peat moss, by volume. If leaf mold is available, it may be used in place of peat moss.

PLANTING — Dig the planting hole twice as large as the root ball and one and one-half times as deep. Fill the bottom of the hole with the prepared soil and tamp down firmly so that the top of the root ball, when placed in the hole, is one inch ABOVE the soil surface, as there will be some settling. The only way camellias are temperamental is in the depth of the planting. The air requirement of the root is high, and when planted too deep, the roots will smother. The root crown should never be more than two inches below the surface of the soil. Fill in around the sides of the root ball with this same mixture, tamping it down firmly with the feet as you fill, then mound soil three inches high in the form of a saucer on the outside rim of the planting hole. Fill this saucer with water.

WATERING — Camellias should be moist at all times, but caution should be taken against their being WET at all times. Water well and deeply, but only as often as your own local weather conditions demand. Too much water too often will cut off the air the roots must have. During the flowering period, watering should be watched as the mature flower is 90% water and a drying out of the plant can cause small blooms as well as bud drop. Camellias will use large quantities of water during the summer growing periods. For container-grown camellias, you will generally need to fill your containers once a week in the summer, and in the winter you should be able to stretch the period to approximately ten days. On very dry days, or when the temperature rises above 85°, sprinkle the foliage and the mulch in the late afternoon.

FERTILIZING — Fertilizing or feeding should start with the first signs of growth, even though the plant is still blooming. Plants should be fed only as needed, and caution taken never to over-feed. Camellias that have been injured with over-fertilizing take several seasons of special care to recuperate. Cottonseed meal or commercial food specifically for camellias should be used. Your local nurseryman or garden shop will carry the prepared mixture best suited to your own local conditions. Follow the directions as printed on the package. If the plant is dry, water well the day before feeding — never feed a dry plant. Feed every 6 to 8 weeks from April through September.

PESTS AND DISEASE — Other than feeding and watering, camellias require very little care. Some insect and pest control is necessary to insure a healthy plant. Scale and mites are the most serious threat as they extract the plant juices and interfere with the normal development of foliage and stem growth. Generally speaking, camellias rarely need spraying, so consult your local nurseryman and make certain that spraying is necessary.

PROTECTION — *C. Japonica*, *C. Reticulata* and the hybrids need protection from hot mid-day sun. For the flower's sake, the whites and pale pinks will need more shade than the deeper colors. Shade is a very relative term; in climates where humidity is high, camellias can stand more sun than in climates that are hot and dry. *C. Sasanqua* is able to stand full sun even in hot dry climates, but does equally well in light shade. As to protection from cold, *C. Sasanqua* will stand temperatures of 10 degrees above zero to 5 degrees below zero with no injury. The japonicas will stand temperatures to 5 degrees above zero, but the complete double flower types will have buds frozen and destroyed at this temperature. *C. Reticulata* is recommended for very mild areas or glass house culture only. The hybrids, because they are hybrids, will vary from variety to variety as to the cold each will stand. Some of them have gone through temperatures of zero with little ill effect.

AZALEAS IN THE LANDSCAPE

No other flowering shrub has contributed more to the gardens of America than the azalea when one considers that by proper selection of varieties, color in the garden can be had from October through June. Azaleas can be handled as pot plants, mass plantings, specimens, tree types, espalier and hedges. The versatility of this plant is unlimited. However, most azaleas are at their best when planted in groups or drifts. An ideal situation for them would be among high trees so spaced as to allow the sun and light to penetrate, yet providing intervals of shade to give the plants some respite from the hot sun. Where there are not trees, the north or east side of the house or high fence would be desirable. It is true that many azaleas thrive in full sun, especially along the coastal areas, but the Southern Indians are best suited for full sun plantings.

CULTURE - SOIL — Azaleas may be grown successfully in various acid soil mixtures, such as leaf mold (redwood pine and oak), sand and light loam, but for best results, pure peat moss or $\frac{2}{3}$ peat and $\frac{1}{3}$ soil plantings have proven best. The hole need not be over 15" deep and 18 to 24" in diameter. Do not set the plant lower or higher than it was originally growing. Always soak peat moss thoroughly before using. Fill around ball of plant firmly and make certain that good drainage is maintained.

WATERING — Azaleas, much like camellias, should be moist at all times, but caution should be taken against their being WET at all times. Water well and deeply, but only as often as your own weather conditions demand. In areas such as Southern California where summer months are dry and arid, one may generally expect to water once a week. Spraying of the foliage in the late afternoon of hot days is very beneficial.

FERTILIZING — Azaleas are basically light feeders and caution should be taken never to over-feed. Three to four feedings spaced from March through September (6 to 8 weeks) is sufficient. Cottonseed meal or a commercial camellia-azalea food should be used. In Southern California use a tablespoon for each feeding of a plant which is about one foot high and one foot across. The labels on your fertilizer will generally advise you to cut the amounts in half for plants in containers. Never fertilize an azalea when leaves show a yellow or paleness between the veins. This is usually caused by lack of available iron and will most often respond to application of one of the many new chelated irons. Continue the use of iron instead of fertilizer until foliage becomes green. The annual use of NUCCIO'S Stabilized Iron is recommended.

PRUNING — Heavy pruning of undesirable branches should be done when they are at their peak of bloom and used as cut flowers. Most varieties of azaleas require one good pinching or pruning of new spring growth in July, thus creating more branches and bushiness for fall bud setting. However, when plants are young and vigorous, such as the Southern Indicas, pruning on new growth should continue through September.

PEST CONTROL — Azaleas are comparatively free of insects and disease, but for good, healthy, pest-free plants, a precautionary spraying in late spring (after blooming) and fall of Malathion or Kelthane can eliminate the danger of thrips and mites.

Blooming season of all Camellias listed is denoted by E., M., L.

RUSTICANA CAMELLIAS

The Rusticanas, considered by many to a Japonica sub-species, come from the higher elevations of Japan where they are insulated from the cold by a snow covering. When the snow melts in the spring, they burst into a mass of color. Rusticanas are generally characterized by their bushy and compact growth, smaller flowers, and profuse blooming habit.

FOLIAGES

There are a number of camellias that are as attractive, if not more so, for their leaf patterns and growth habits as they are for their flowers. Any of the following would add interest to any camellia collection. (You will note the use of the word "Benten" on several varieties. This word had been used in Japan to indicate a variety on which the leaf is darker in the center and bordered by a lighter margin. We have decided to continue this tradition with such varieties developed in this country as well.) "J" indicates Japonica; "S" Sasanqua.

	12-18"	18-24"	24-30"	30-36"
BENTEN-KAGURA — (J) Foliage sport of Daikagura. Irregularly shaped green leaf finely bordered yellow. Rose red medium to large peony. More compact than parent. M.	\$7.50	\$12.50		
FUKURIN-IKKYU — (J) Miniature. Semi-double. Light pink, white edge, occasional rose red stripe. Unusual variegated foliage, green with irregular light green border. M-L.	7.50	12.50		
HANA-DAIJIN-BENTEN — (Toichi Domoto Nursery) (S) Foliage sport of Hana-Daijin. Irregularly shaped leaf. Green with occasional gray green stripe bordered with a light yellow margin. Large deep rose pink single. Upright but very slow. E.	7.50			
KI-FUKURIN-BENTEN — (J) Compact and upright plant with green leaves bordered lighter green. Not profuse but produces an unusual miniature anemone with tight tufted center. Orangi salmon red. M-L.	7.50			

	12-18"	18-24"	24-30"	30-36"
KUJAKU TSUBAKI — (J) The "peacock camellia," so-called because of its long and narrow peach-like leaf and its tubular, slender petalled flower. Small, single, red mottled white. Semi-cascading growth habit. M-L.	7.50			
REIGYOKU — (J) Beautiful foliage camellia. Glossy green leaves with patch in center that starts out pink when new and becomes light yellow at maturity. Flower small, orange red, single. Growth somewhat loose but compact. M.	7.50			
SASANQUA COMPACTA — (S) Very dark green dwarf sasanqua. Blooms only occasionally but produces a medium to large single white blossom bordered rose red. Exceptional garden plant for compact areas. 4-10" size only.	6.00			
UNRYU — (J) Medium upright plant with very unusual zig-zag growth pattern. At each leaf, growth proceeds in opposite direction at 45° angle. Single, small, deep pink. M.	7.50	12.50		
WHITE DOVES BENTEN — (S) Foliage sport of White Doves. Irregularly shaped gray green leaf with a fine mustard yellow margin. Semi-double white flower somewhat smaller than parent's. Growth likewise is more compact.	7.50

NOTES:

New Satsuki Azaleas

We at Nuccio's Nurseries feel confident that the satsuki azalea will contribute greatly to our Gardens as landscape and potted plants for the same reasons they are so popular as Bonsais.

Their culture is basically the same as all evergreen azaleas such as Kurumes, Belgians and Southern Indicas, etc., and they are as hardy as most Kurumes (5°) depending on age of plants, 3 to 4 years, and suddenness of temperature change.

Because of their distinctiveness and beauty, we offer the following list of varieties, selected from hundreds.

The following format is used in the descriptions.

I Flower:

A—Color: The word "variations" for the many sports or combinations of colors, and the word "center" for the base color when blooms are bordered deeper or toned.

B—Size: Very small—1 ½"; Small—1 ½-2"; Medium—2-2 ½"; Medium large—2 ½-3"; Large—3-4"; Very large—4-5"

C—Form: Single, semi-double and double with petals that are wavy, frilled, pointed, round, spider or narrow and spaced, tubular or bell shaped.

II Growth Habit: Most satsuki varieties are considered dwarf, 3' or less in 12 to 15 years, and with dense, spreading growth (wider than tall), and good branching qualities without pruning. However, they do respond to pinching and pruning for desired forms.

Very slow—12"; Slow—1-1 ½'; Medium—1 ½-2'; Fast (vigorous)—2-3'

III Blooming Season: Satsuki means fifth month, and, of course, most varieties are late blooming (May-June). In mild climates, such as California, many varieties will spot bloom in the fall and winter months. However, with all varieties pruned in mid-July, the following schedule and code is used:

E—early (March-April); M—mid-season (Mid April-May); L—late (Mid May-June); VL—very late (Mid June-July)

All varieties in this list are \$6.00 each.

AIKOKU—White with occasional stripe of purple and lavender pink. Some solid pink, edged white and white center, bordered purple. Medium large, single, round petals. Medium, upright growth. M.

CAMELLIA SCIONS

Due to the ever increasing costs of freight, we are offering scions to those interested in propagating their own camellias. Because our primary business is growing and selling plants, scions will be sold only if readily available; we cannot, therefore, offer scions of varieties of which our saleable stock is limited. We shall cut scions only from healthy, vigorous plants, and we shall pack them properly for prompt shipping, thereby giving you the best possible opportunity for maximum propagation success. Although we only guarantee that each scion will have but one growth bud, most of our scions will usually have two or three graftable buds.

On Scion orders less than \$50.00, add \$2.00 for handling. On orders of \$50.00 or more there is no handling charge. Postage on domestic orders will be paid by us. Foreign orders will be billed separately for postage at time of shipping. (NOTE: On all foreign orders please add \$6.00 for the required Department of Agriculture inspection fee). Please be sure to include your remittance with your order.

Those wishing to pick up scions at the nursery must place and pay for order a minimum of one week in advance of pick-up date.

This year our scion prices are as follows:

If catalog price for 12"-18" size camellia is:	Scion price is:
\$ 5.00, \$6.00	\$1.00 each
\$ 7.50	\$3.00 each
\$10.00	\$5.00 each

Scion price for varieties not listed under 12-18" size: PRIMA BALLERINA — \$5.00 each; HIME-SHIRAYUKI — \$3.00 each; ALL OTHERS — \$1.00 each.

The best scion wood is available from November through February, and we recommend that you place your scion order at this time. (Due to the excessive mail during Christmas, we do not recommend shipment during December).

COLLECTOR'S CORNER

We have available in limited quantities only the following varieties. If interested, please order early. Scions of all varieties are \$5.00 each. (Please see "CAMELLIA SCIONS" for handling charges, etc., on this page). An asterisk indicates that one year grafts are available in that variety as well. All are \$10.00 each (exception: Beryl's Choice — \$15.00).
