THE COVER FLOWER

C. JAPONICA 'NUCCIO'S PEARL' COURTESY NUCCIO'S NURSERIES

'Nuccio's Pearl' is a chance C. japonica seedling found in the seedling yard at Nuccio's Nurseries. (The nursery propagates about 60,000 seedlings a year until they bloom and then uses them for understock.) The bloom is a medium formal double with a delicate pink, sweet-pea color shading to deeper pink on the edges of the petals. The plant has good foliage; it grafts well and propagates readily from cuttings. It has a vigorous, up-right growth and it blooms mid-season to late. Nuccio's Nursery is introducing 'Nuccio's Pearl' in September, 1977.
